Safety Management

Safety Management

The act of understanding and making decisions and taking actions to lower risk, inherent in all human activity, to acceptable levels.

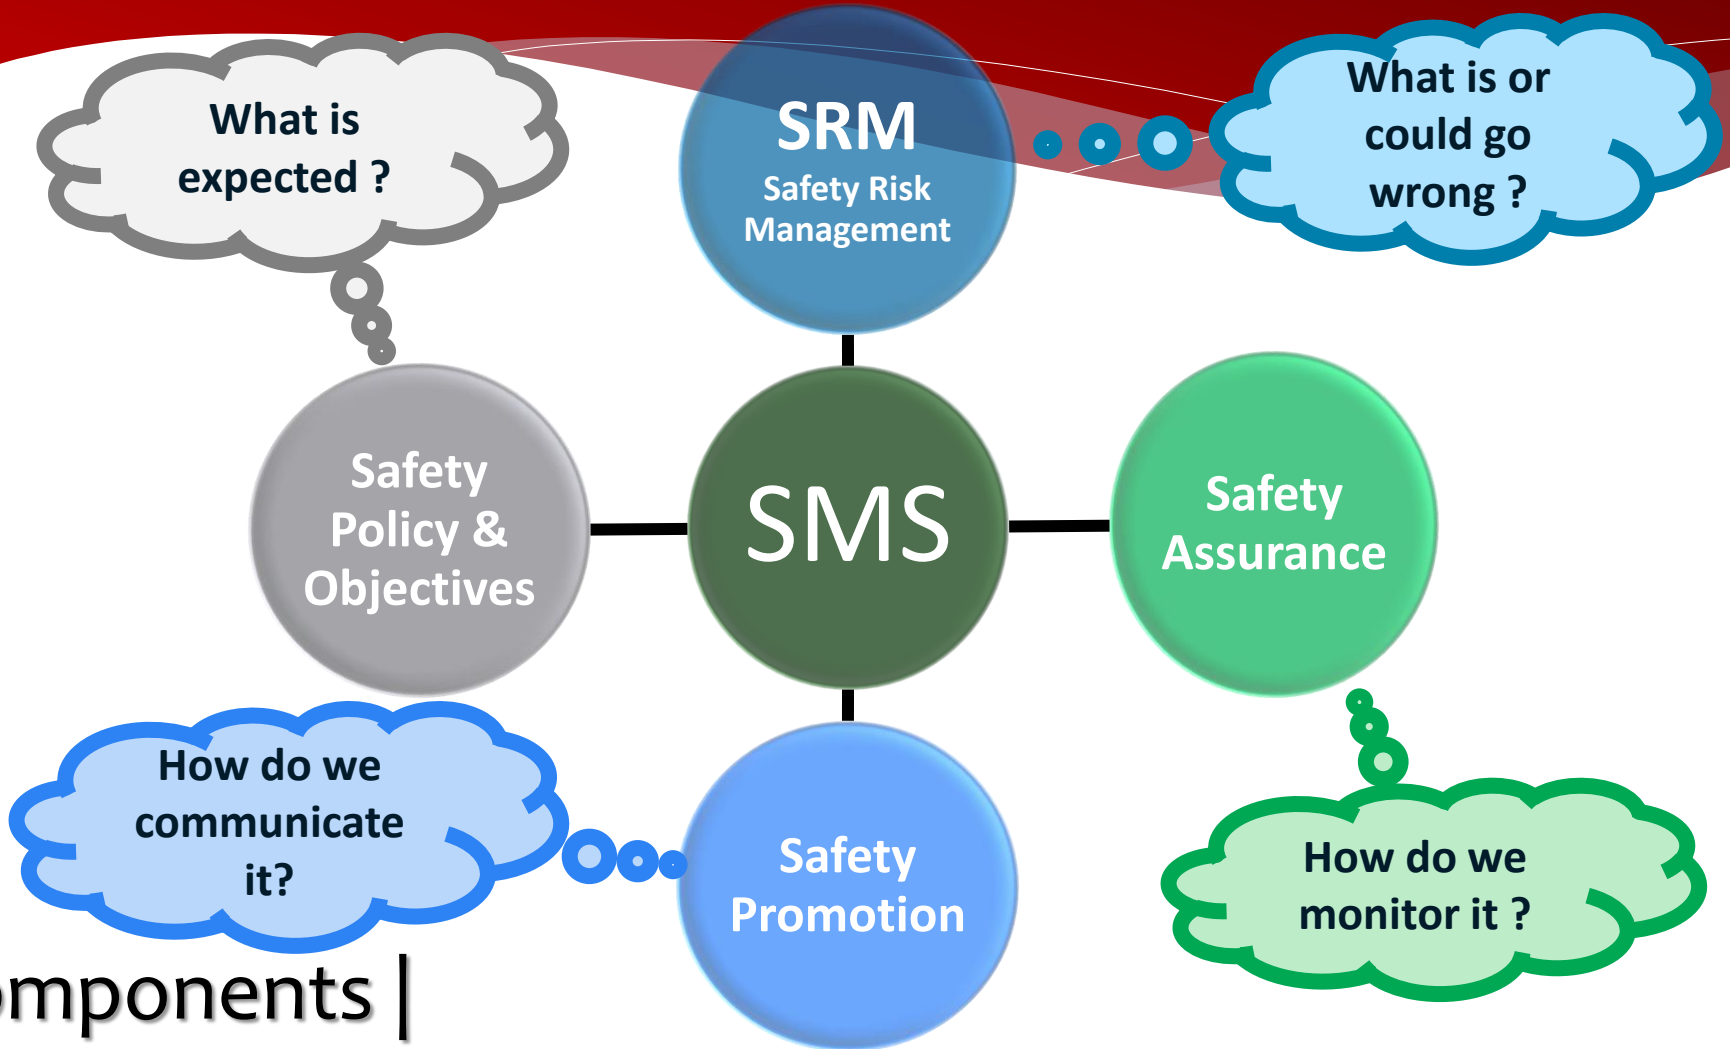

~ FAA Order 8000.369: SMS Guidance

Safety Management

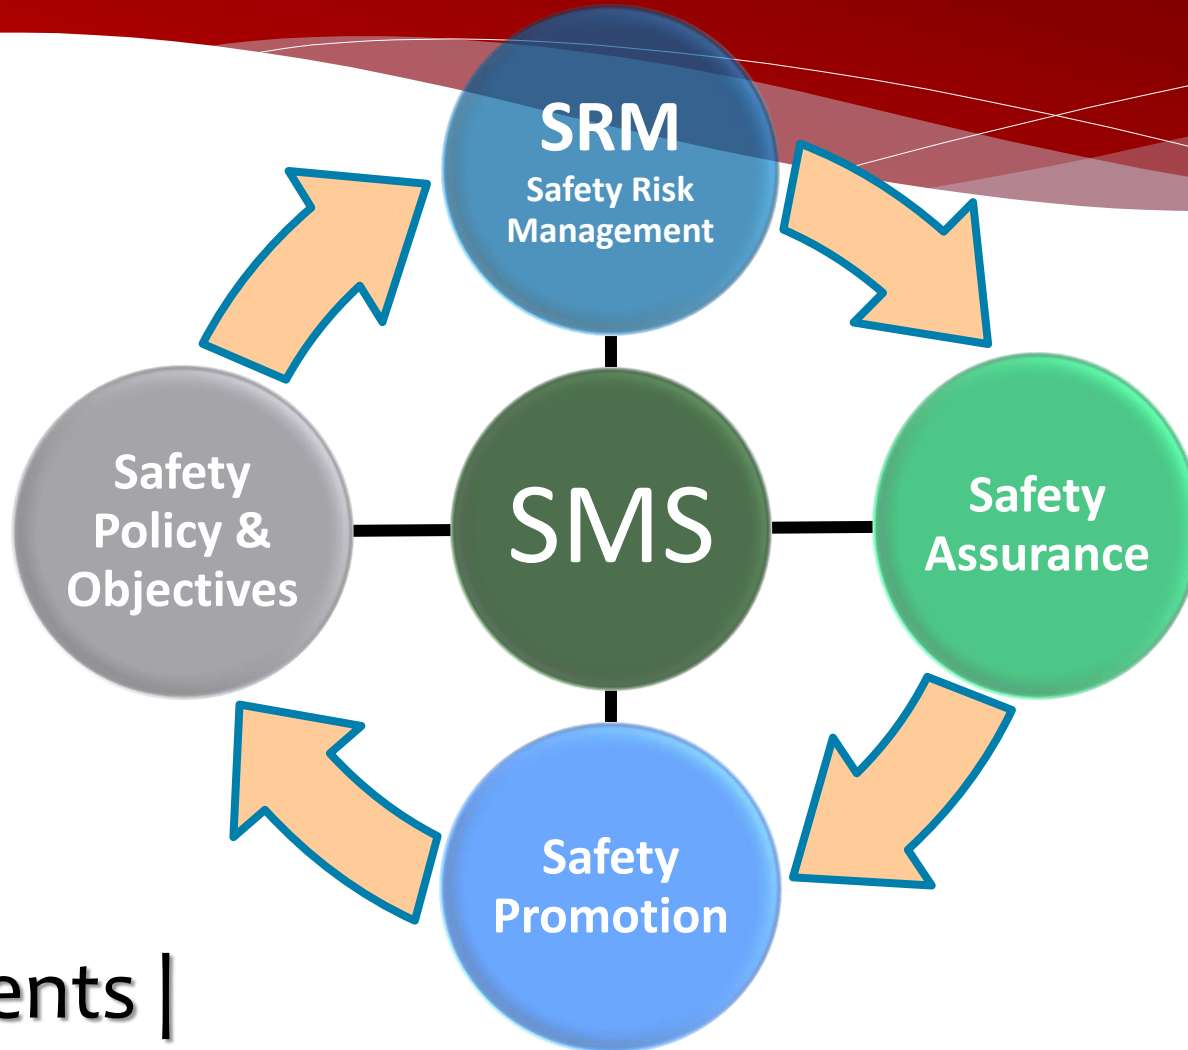

Components |
of a SMS

Safety Management

Components |

Safety Management

Components |
Relationships

Safety Management

SMS

. . . a systematic approach to
improving safety performance

Safety Management

Dilemma of the Two P's

Protection Goals

Production Goals

The Safety System

What are the bounds of the system ?

What is your function within the system ?

What is the focus of the system ?

Safety Management

Safety Management

“Hazard identification and safety risk management are the core processes involved in the management of safety.”

~ ICAO – SMM 4th Edition

So what is Safety Assurance and why should I care?

Safety Assurance

Safety Assurance

... processes and activities to determine whether the SMS is operating according to expectations and requirements, which involves continuously monitoring its processes as well as its operating environment to detect changes or deviations that may introduce safety risks or the degradation of existing safety risk controls.

~ ICAO – SMM 4th Edition

Safety Assurance

Safety Assurance

- ... goal is to watch what is going on and review what has happened to ensure that your objectives are being met.
- ... requires monitoring and measuring safety performance.
- ... will yield information used to maintain the integrity of risk controls.
- ... a means of assuring the safety performance of the organization, keeping it on track correcting it where necessary and identifying needs for rethinking existing processes.

Linking Safety Assurance and Safety Culture

Culture

Climate

Safety Culture

What is important

about
safety

How things
work

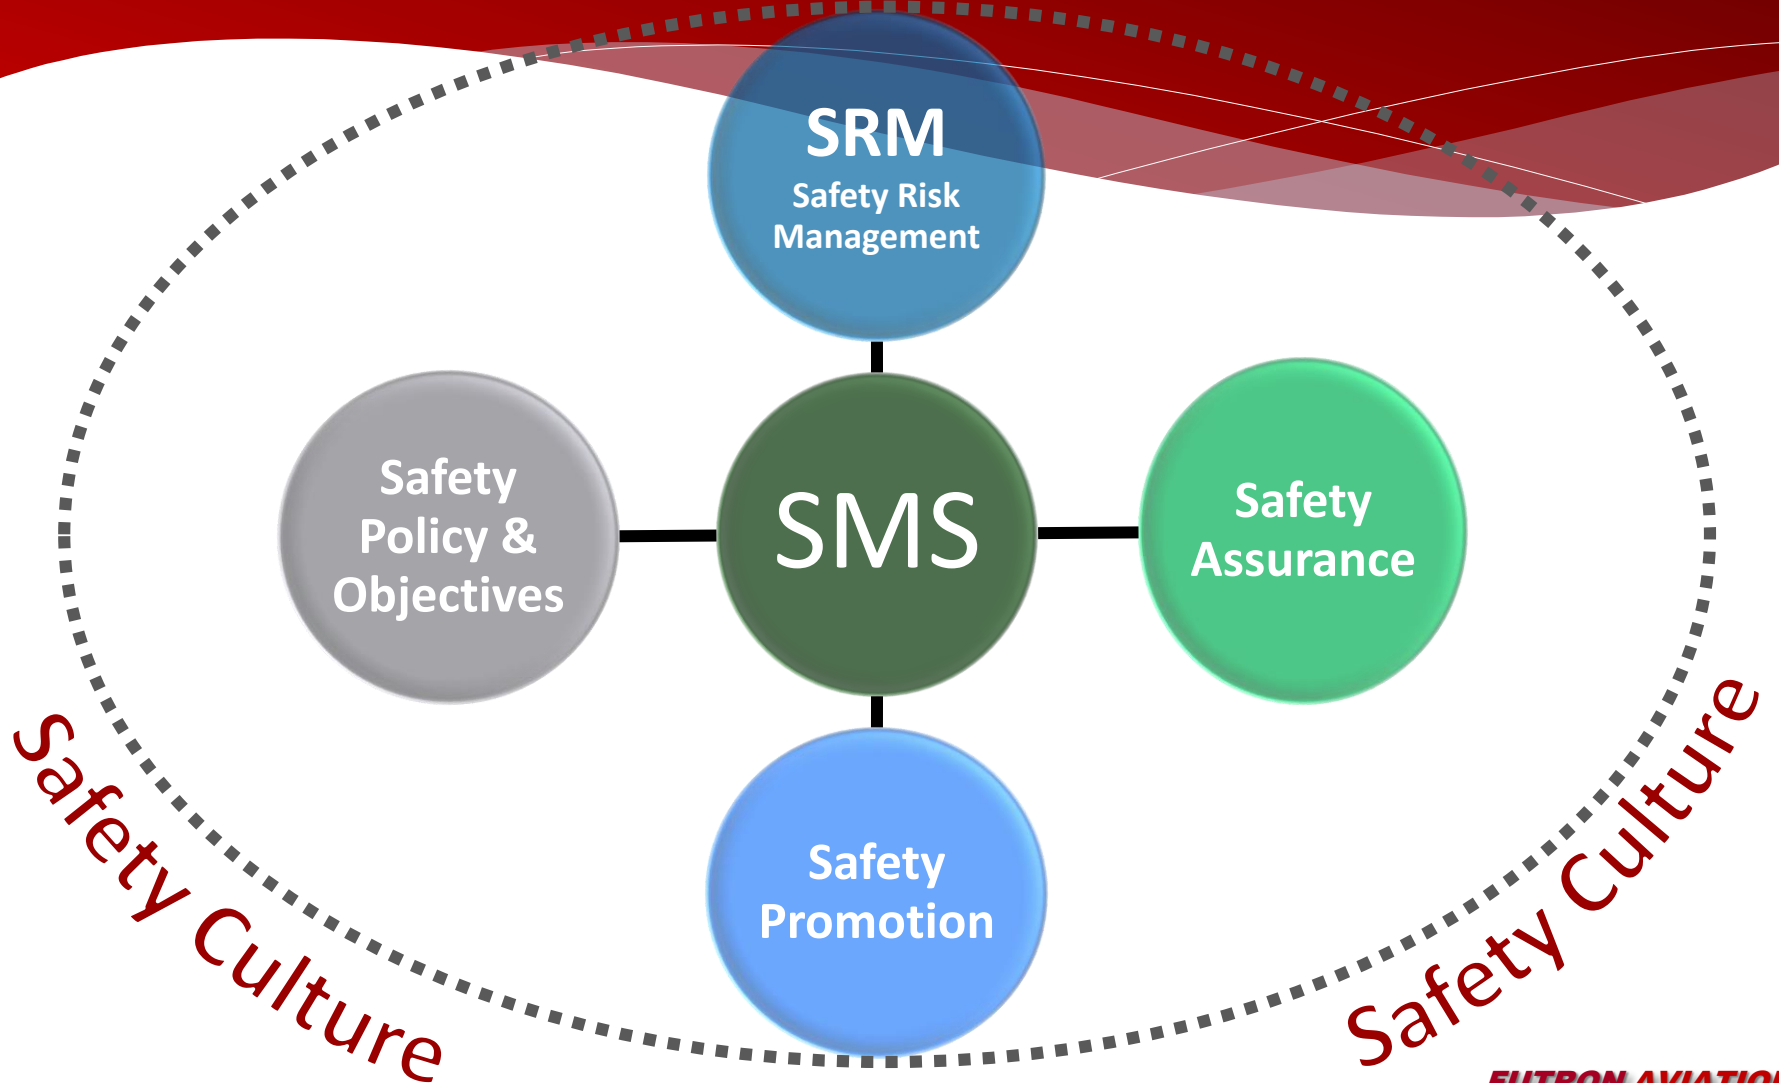

“Shared values and beliefs that interact with an organization’s structures and control systems to produce behavioral norms.”

“The way we do things around here”

Elements of a Safety Culture

Safety Culture and SMS

Definitions

Culture

Climate

Organizational Climate

↑
Safety

Perceptions

... the extent to which members of an organization share positive (or negative) views about their organization in terms of:

- effectiveness of leadership
- management of resources
- quality of work environment
- system of rewards
- treatment of personnel

**Impacts
on
Safety**

and the influence these views have shaping patterns of “life” within the organization.

Management
Action

Safety Climate Assessments

Purpose:

Measure an organization's ability to safely conduct maintenance and flight operations in terms of leadership, culture, policies, standards, procedures, and practices.

The surveys examine the organizational climate using a human factors framework.

- and our workload keeps growing.
- # 3. (Disagree) I see shops on night check that have 1 person or 2 at the most, sometimes with heavy workloads, for months at a time. I know we're working to fix the billet situations as a command, but the manning can sometimes be the biggest obstacle to the maintenance department.
 - # 4. (Disagree) Some shops have the bare minimum which slows down maintenance and makes it very difficult to do the jobs needed in a timely manner.
 - # 5. (Disagree) some shops are very undermanned and have to utilize more people on day shift to work the flight schedule.
 - # 6. (Disagree) some shops have only 2 or 3 people on their shift, which then requires other shops to assist them instead of doing their own work.
 - # 7. (Neutral) again there is a sufficient amount of rated people in our command but not in our shop
34. *Night crew has sufficient supervisors for their workload.*
 - # 1. (Disagree) Squadron is undermanned at almost every level.
 - # 2. (Disagree) some shops are very undermanned and have to utilize more people on day shift to work the flight schedule.
 37. *Leaders/Supervisors in my unit care about my quality of life.*
 - # 1. (Neutral) work first then we will see what we can do for you.
 46. *The most hazardous activity I perform is...*
 - # 1. handling hydraulic fluids.
 - # 2. Issuing and receiving HAZMAT.
 - # 3. OPTEMPO as it correlates to the age and condition of our aircraft - our work is inherently dangerous and made more so by the lack of experienced personnel in the maintenance work centers.
